PORTFOLIO

<https://liam-ai-reality.github.io/portfolio/>

Summary

Forward Deployed Engineer who embeds with customers to ship AI features end to end—from data contracts and model calls to APIs, UI, and AWS production ops. Built and scaled multi tenant SaaS platforms in regulated, high availability environments and now deliver Bedrock-native agentic systems, compliance tooling, and automation. Strong at translating messy real-world needs into working software fast.

Core Skills

- Customer embedding & discovery
- Data ingestion, ETL & contracts
- AWS production ops (serverless + data)
- Dev tooling for AI coding agents
- Rapid prototyping ' production delivery
- API design & performance tuning
- Multi-tenant architecture & isolation
- Compliance & auditability (EU AI Act)
- Agentic/LLM workflow design
- Full-stack feature delivery (API + UI)
- Reliability, incident response & security
- Stakeholder management & clear documentation

Tooling

Rust, Go, TypeScript, Python, AWS (Bedrock, CDK, Step Functions, EventBridge, Lambda, DynamoDB, Aurora Serverless v2), PostgreSQL, Prisma, SQLite, Looker, Palantir, Nuvo, Microsoft SQL Server, Jira, Semgrep, OSV, Gype, gitleaks, Trivy, Checkov, crates.io, npm, PyPI

Experience

Founder & AI Forward Deployed Engineer

Reality AI (London, United Kingdom)

- Embedded with client teams to deliver customer-facing AI products end to end (data ' model calls ' API ' UI ' production ops), leaving maintainable handoff documentation.
- Built a live field-service dispatch optimization pilot (Python + TypeScript), owning ingestion, classification, routing optimization, API, and UI (details abstracted at client request).
- Shipped a seven-tool EU AI Act compliance suite (Next.js, Prisma, PostgreSQL) spanning risk classification, FRIA workflow, technical documentation generation, and post-market monitoring (details abstracted at client request).
-

Published OSS dev tooling for AI coding agents: kasp v0.4.0 released across crates.io, npm, and PyPI; plus cli-printing-press (Go + SQLite), enhanced-agentic-flow (Claude Code plugin), and security_audit (Python).

- Designed and built Bedrock-native pipelines and multi-tenant platform infrastructure as code in AWS CDK (details abstracted at client request).

JANUARY 2024 - PRESENT

Executive Vice President of Technology

Fabric (London, United Kingdom)

- Owned customer outcomes for a multi-tenant SaaS platform serving 10+ enterprise media clients including BBC Studios, Paramount Global, ITV, A&E Networks, Crunchyroll, and Amazon.
- Defined and executed delivery across core platform, client delivery, infrastructure, and compliance workstreams—balancing strategic priorities with sprint execution.
- Delivered 699 tickets across a 5-person squad in 12 months, sustaining 40–44 story points per two-week sprint despite team attrition.
- Led response to a critical npm supply chain security incident, coordinating credential rotation across 15+ environments with zero service disruption.
- Modernized the platform while shipping client features (Aurora Serverless v2, DynamoDB two-way shim, Nuvo bulk ingestion, Looker reporting).

MARCH 2022 - JANUARY 2024

Chief Technology Officer

Fabric (London, United Kingdom)

- Partnered with commercial and delivery teams to support enterprise customers (including Warner Bros. Discovery, Paramount, and Amazon) by translating requirements into shippable platform work.
- Scaled the technology team from 4 to 24 within two years, creating repeatable delivery practices and mentorship paths to sustain rapid execution.
- Led consolidation of legacy systems and shipped Localization and Supply Chain Reporting modules to raise reliability and client service levels.

MARCH 2018 - MARCH 2022

Product Director

Fabric (London, United Kingdom)

- Co-architected Fabric Studio from scratch and shipped the first production build in six months.
- Implemented Agile workflows and Definition of Done practices that reduced reported bugs by 30%.
- Ran client-facing product demos and deep technical walkthroughs to unblock adoption and close enterprise SaaS deals.
- Built a Palantir data pipeline for the platform's largest migration (1.2M titles, 40M+ data points) for the ITVAA production environment.

AUGUST 2010 - MARCH 2018

Technical Systems Engineer

Tatts Group (Brisbane, Queensland, Australia)

- Operated real-time monitoring and production systems across gaming, horse racing, and sports betting in a highly regulated, high-availability environment.
- Administered thousands of SQL databases and built monitoring dashboards and alerting to improve reliability and uptime.
-

Developed deep domain expertise in wagering operations, odds management, regulatory compliance, and real-time data flows.

Certifications

- **AWS Solutions Architect – Professional:** Amazon Web Services
- **AWS Solutions Architect – Associate:** Amazon Web Services
- **AWS Cloud Practitioner:** Amazon Web Services
- **Microsoft SQL Server Certified:** Microsoft
- **ITIL Practitioner:** AXELOS / ITIL
- **Croner HR Certification:** Croner

Achievements

- Shipped customer-facing AI products end-to-end in embedded engagements (data ' model calls ' API ' UI ' production ops), optimized for fast time-to-value and clean handoff.
- Published OSS across three package ecosystems: kasp v0.4.0 on crates.io, npm, and PyPI; plus additional public tooling in Go, JavaScript, and Python.
- Grew Fabric Studio from \$100k ARR to \$5m USD ARR, serving 10+ enterprise clients including BBC Studios, Paramount Global, and Amazon.
- Grew active user base by 52% (1,253 to 1,899) in 12 months while maintaining stability across 15+ client environments.
- Architected API endpoints delivering 250% performance improvement, improving responsiveness and reducing infrastructure load.
- Reduced AWS spend by 26% (\$274,312 annual saving) via EC2/RDS right-sizing based on traffic pattern analysis.
- Scaled the technology team from 4 to 24 within two years with 95% direct report retention over 5 years and 90%+ live-account client retention.
- Secured £260,821 in HMRC R&D tax rebates through technical documentation and claims management.
